## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Wilkinson et al'722.

The Wilkinson et al '722 reference shows in figure 15, a natural gas processing method which separates the cooled feed into a first stream 33 and a second stream 32 and inputs both streams into a distillation column. A stream 42 is removed from the column below the entrance of the second stream, cooled and partially condensed, with the liquid being supplied back to the top of the column as reflux.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein

were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 2-5,9,13,17,21,29-33 and 57 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wilkinson '722 in view of Campbell et al '469. Wilkinson '722 discloses applicants' basic inventive concept, a natural gas processing method which splits the feed into a distillation column and derives a stream from below the entrance of one of the streams and cools and separates the removed stream, with liquid from the removed stream being used as reflux at the top of the column, substantially as claimed with the exception of splitting the feed into a liquid and two vapor flows and combining some of the liquid with one of the vapor flows. Campbell et al show this feature to be old in the natural gas processing art. It would have been obvious to one of ordinary skill in the art at the time of applicants' invention from the teaching of Campbell et al to modify the natural gas processing system of Wilkinson et al by splitting the feed into a liquid and two vapor streams and combining a portion of the liquid with one of the vapor streams, to improve the separation derived in the column. In regard to claim 17, manipulating the conditions in a column to derive the desired products is considered well within the scope of the ordinary practitioner.

***Allowable Subject Matter***

Claims 6-8,10-12,14-16,18-20,22-28,34-56 and 58-65 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
